Features /Advantages:

- 1. Simple structure, convenient operation, quick connect and open it
- 2. compact size, light weight, good sealing and interchangeability
- 3. Adapt to all kinds of working conditions, widely used in liquid, powder and other medium
- 4. Joint connected with taper pipe threads, outside taper pipe threads, intubation connection, flange connection, etc
- 5. Cam & groove couplings are easy to operate. Camlock consists of two parts male adapter and female coupler. You just need insert the adapter into the coupler until contact is made with the gasket. Then press down the cam arms simultaneously to produce a uniform gasket compression. During the process of installation, no tools are required and hand pressure is enough. Hence, camlock fittings not only save your time but also the tools and human power
- 6. Cam & groove couplings are equipped with PVC suction hoses, lay flat discharge hoses and other low-pressure hoses. It can simplify the operation and save working time greatly. However, cam locks are not suitable for any kind of hose. It is forbidden to be used in compressed air or gas or high-pressure applications
